

Univariate Analysis

1. What is the distribution of tumor display_size ?
2. How are the texture values distributed across the dataset ?
3. What is the average perimeter of tumors in the dataset ?
4. What is the range of sales_price values observed in the dataset?
5. What is the distribution of battery capacity across the dataset ?
6. What is the distribution of RAM in years?
7. What is the maintenance history distribution among the sales prices?
8. How does the ratings vary across the dataset?
9. What is the battery_capacity among the batteries?
10. What is the distribution of discount_percent ?
11. How many display_size required ?
12. How many sales_price need maintenance?
13. What is the distribution of sales ?

Bivariate Analysis

1. Is there a correlation between tumor discount and sales ?
2. Is there a correlation between tumor battery and tumor sales?
3. What is the relationship between display_size and discount_percent of tumors?
4. What is the relationship between ROM and RAM of tumors?
5. Is there a correlation between sales_price and the sales ?
6. Does battery_capacity correlate with the sales_price ?
7. Is there an association between RAM and the need for ratings?
